

a The paired test traces the declared policy-source boundary

Evaluator boundary	Tested score-label path to policy	Delete / poison score label	Edit policy-relevant public facts
Answer-coupled FEC-v2 authored-oracle compiler	OBSERVED direct label -> policy channel	delete: 28/28 compile failures poison: 28/28 contracts changed	not queried known-coupled control scoped to label dependence
Public-input compiler public-input control	NOT ADMITTED keys excluded; closure checks passed	28/28 each contracts invariant under deletion and poisoning	7/7 conditions over 4 fixtures across all three grammars
External policy evaluator boundary control · not replication	NOT ADMITTED label absent from evaluator request	6/6 groups decision invariant across original / deleted / poisoned	2/2 paired public-trace relations changed decision

b Public-input metamorphic stress test

Invariance · 28 fixed tasks

■ Rename domain identifiers	28/28
■ Rename evidence identifiers	28/28
■ Insert irrelevant evidence	28/28
■ Compose all three	28/28

Fail closed · 13 baseline-apply tasks

■ Remove authority	13/13
■ Mismatch authority target	13/13
■ Mismatch destination	13/13
■ Mismatch authority scope	8/8
■ Expire authority	8/8

112/112 nested deterministic conditions
(3 primitive + 1 composed / task)

55/55 nested authority conditions
(3 or 5 / task, by family)

c External evaluator boundary control

BOUNDARY CONTROL · NOT REPLICATION pinned 2340fe2d

6/6 **label-invariance groups**
original / deleted / poisoned labels

2/2 **public-fact relations**
paired trace edit changes the decision

2/2 **policy-source relations**
paired policy edit changes the decision
